Education

B .Tech - IT Knowledge Institute of Technology , Salem

Year: 2025 (2nd Year)

Skills

C ,C++

HTML(basic)

CSS(basic)

Projects

1. FIRE ALERT SYSTEM:

A Fire Alert Detection System is designed to identify smoke, heat, or flames at an early stage. It uses advanced sensors and IoT technology to monitor environments in real time. Immediate alerts are sent to authorities and occupants through alarms or mobile notifications. This helps in quick evacuation and reduces potential damage to life and property. The system enhances safety in homes, industries, and public spaces

Certificate

Web Development Internship – Cod Soft
